

Vendor Account Verification

There need to be away to allow Vendors to create an account and verify their business (or claim a business in the database as their own).

My thought is to have a couple of options:

1. Automatic process by an email being sent to an email using the same domain as the company' website
2. A form they can submit with an attachment showing their name/business name/address such as a Letter from the Government/bill/check/business card/etc. Admins would then have to manually verify the account.

I am curios on your thoughts?

Once verified, they would have access to the Vendor Profile.
