

Tasks:

Are these multiple notes apis
related to the Notes and Files v2?
<https://trello.com/c/705BcQAc> If so, then I definitely understand.

- Properties

- Multiple Public Notes
 - APIs
 - Update Existing Front API to incorporate multiple public notes
 - Controllers(Logics) and Model
 - Created above API central logic from scratch
 - Database
 - Create related table in database.
- Multiple Staff Notes
 - APIs
 - Update Existing Front API to incorporate multiple staff notes
 - Controllers(Logics) and Model
 - Created above API central logic from scratch
 - Database
 - Create related table in database.
- Multiple Tenant Notes
 - APIs
 - Update Existing Front API to incorporate multiple tenant notes
 - Controllers(Logics) and Model
 - Created above API central logic from scratch
 - Database
 - Create related table in database.
- Multiple Private Notes
 - APIs
 - Update Existing Front API to incorporate multiple private notes
 - Controllers(Logics) and Model
 - Created above API central logic from scratch
 - Database
 - Create related table in database.
- Bulk Unassign parking space(unquoted)
 - APIs
 - To Unassign multiple parking spaces

- Controllers(Logics) and Model
 - Created above API central logic from scratch
- Parking Spaces Assignments History(unquoted)
 - APIs
 - To get parking space assignments history
 - Controllers(Logics) and Model
 - It is pure server side work to maintain parking spaces assignments history
 - Need to create its central logic from scratch
 - Create above api logic.
 - Database
 - Create related table in database.
- Fields added in Property Materials
 - APIs
 - Update existing api to add new fields.
 - Controllers(Logics) and Model
 - Need to save extra field
 - Update duplicate api to save new fields as well
 - Database
 - Create new fields in related table in database.
- Give option to change files name
 - APIs
 - Update all files related APIs accordingly
 - Controllers(Logics) and Model
 - Need to save name along file
 - Database
 - Create new fields in related table in database.
- Units
 - Multiple Public Notes
 - APIs
 - Update Existing Front API to incorporate multiple public notes
 - Controllers(Logics) and Model
 - Created above API central logic from scratch

The history was in the original Properties PDF on the bottom of the parking page - is this for something different?: "VIEW" would show the space and their assigned history, edit, would allow you to edit the space.

Not sure what this is referring to? Is this for the Materials v2? <https://trello.com/c/AljTxa6l>

If not, I wouldn't want anything done to existing Materials as it will be changed with v2.

Is this what is show in the Multiple Files Upload concepts from this: <https://trello.com/c/Udt2rmUV> ?

Are these multiple notes apis related to the Notes and Files v2? <https://trello.com/c/705BcQAc> If so, then I definitely understand.

If not, I wouldn't want changes done to the Notes since I do plan on a v2 and unsure what wasn't included in the original.

- Database
 - Create related table in database.
 - Multiple Staff Notes
 - APIs
 - Update Existing Front API to incorporate multiple staff notes
 - Controllers(Logics) and Model
 - Created above API central logic from sctrach
 - Database
 - Create related table in database.
 - Multiple Tenant Notes
 - APIs
 - Update Existing Front API to incorporate multiple tenant notes
 - Controllers(Logics) and Model
 - Created above API central logic from sctrach
 - Database
 - Create related table in database.
 - Multiple Private Notes
 - APIs
 - Update Existing Front API to incorporate multiple private notes
 - Controllers(Logics) and Model
 - Created above API central logic from sctrach
 - Database
 - Create related table in database.
 - Inline Unit Names Renaming
 - APIs
 - To update unit name inline
 - Controllers(Logics) and Model
 - Need to created above mentioned API central logic from sctrach
 - Database
 - Create related table in database.
 - Fields added in Unit Materials
 - APIs
 - Update existing api to add new fields.
 - Controllers(Logics) and Model
- This I def understand as I know it was something not mentioned before.
- Not sure what this is referring to?
Is this for the Materials v2? <https://trello.com/c/AljTxa6l>
- If not, I wouldn't want anything done to existing Materials as it will be changed with v2.

- Need to save extra field
- Update duplicate api to save new feilds as well

- Database
 - Create new fields in related table in database.

- Give option to change files name
 - APIs
 - Update all files related APIs accordingly
 - Controllers(Logics) and Model
 - Need to save name along file

Is this what is show in the Multiple Files Upload concepts from this: <https://trello.com/c/Udt2rmUV> ?

- Database
 - Create new fields in related table in database.

- Tenant

- Add Multiple Pictures and Email field in Emergency Contants
 - APIs
 - Update existing api to incorporate email fields
 - New Api save pictures
 - Controllers(Logics) and Model
 - Need to update exsiting api according to new email field.
 - Need to create central logic from scratch for saving pictures
 - Database
 - add new fields in database
 - Create new table for pictures

I do know this is new so I do understand this one

- Bulk Verify Received Keys
 - APIs
 - To verify multiple received keys at once in bulk selection
 - Controllers(Logics) and Model
 - Need to create central logic from scratch

I do know this is new so I do understand this one

- Bulk Verify Returned Keys
 - APIs
 - To verify multiple returned keys at once in bulk selection
 - Controllers(Logics) and Model
 - Need to create central logic from scratch

I do know this is new so I do understand this one

- Bulk Verify Received Loanable Items

I do know this is new so I do understand this one

- APIs
 - To verify multiple received loanable items at once in bulk selection
- Controllers(Logics) and Model
 - Need to create central logic from scratch

- Bulk Verify Returned Loanable Items

- APIs
 - To verify multiple returned loanable items at once in bulk selection
- Controllers(Logics) and Model
 - Need to create central logic from scratch

I do know this is new so I do understand this one

- Tenant History

- APIs
 - Update existing api

I know the Tenant History/saving was mentioned in several of the pdfs - not sure what is new with this api or the need for the change?

- Controller
 - Need to update tenant history saving mechanism from scratch
 - Need to keep record of single single field individually

- Database
 - Need to update relevant tables according to new logic

- Give option to change files name

- APIs
 - Update all files related APIs accordingly
- Controllers(Logics) and Model
 - Need to save name along file

Is this what is show in the Multiple Files Upload concepts from this: <https://trello.com/c/Udt2rmUV> ?

- Database
 - Create new fields in related table in database.

- Admin Settings List

- Vehicles(unquoted)

- APIs
 - To add new makes
 - To get all makes
 - To delete makes
 - To add new models
 - To get all models
 - To delete models

Still want to talk with you on how it is set to update/what it used for initial database?

- Controllers(Logics) and Model

- Need to create above mentioned central logic

- Tenant History

- Initially it was just icon for tenant history. But in real it was complete functionality and too much complex

- Duplicate

- Every single functionality need to replicate in duplicate feature
